Prezi Lesson Plan

Topic:	**Elements of Art: color, line, shape, value and texture.**
Target Audience:	First year design students
Standards:	Standard 1: Facilitate and Inspire Student Learning and Creativity, and Standard 2: Design and Develop Digital Age Learning Experience
Objectives:	Given a studio problem, students will be able to use the 5 elements to fix the design with 100% accuracy.
Material/ Time Required:	A magazine, paper, an ink-brush, an ink-pen, a zacto knife, and a ruler can be used. The students can also be creative by using any item/items in their classroom.
Scope and Sequence	Students in the first year design class will be given a studio problem based on the five elements (color, line, shape, value and texture). They will be expected to work on all five parts of the problem. Part one of their studio problem will be dealing with color, part two will be dealing with line, and so on. After finishing the problem, students will then scan their work and edit with Photoshop. The students will then make a visual presentation of their work using Prezi. They will be able to zoom into details of their work, and explain the significance of their design.
Supplementary Materials:	The teacher must explain to the students that they need to be creative. Therefore, they may use any materials in the classroom to create their design. This means any type of paint or art tools.
Evaluation:	The students' Prezi presentations will be graded according to the rubric. They will need to solve all aspects of their design problem using the 5 elements.
