Lesson Plan for Elementary Education

Objects in the Sky

**Overview**
The goal of this project is to introduce different objects in the sky and then create a PowerPoint and upload it on SlideBoom for others to review and view. The students will create and understand the different objects in the sky during daylight.

**Objectives**
The student’s objectives will be to understand the different objects in the sky during daylight, then be able to find them on the internet and insert them on a PowerPoint for further uploading. They will be able to make a PowerPoint of three objects they know are in the sky.

**Standards**
Standard 3.3.3 Objects in the sky.

**Materials**
The students will be in a lab and using a computer that has the Internet and PowerPoint. Also they will need access to SlideBoom.

**Procedure**
1. First give them examples of things in the sky during the daylight such as: clouds, sun, or birds.
2. Next, ask the students to open up PowerPoint.
3. Then ask the students to get three slides open and tell them to place only one picture from Clip Art of something that is found in the sky during daylight.
4. Next, once that is completed then ask the students to log into SlideBoom and upload the presentation to share.
5. Ask the students to use your account information and then have them upload it.
6. First have them push upload, then push browse until they have found their own file name. Then push upload.
7. Have the children look up their presentations, and other classmates.

**Evaluation**
Have the students evaluate another child’s performance by looking up other presentations and making sure they’re objects in the sky.
