### OVERVIEW
This lesson will allow college students to make a presentation using Slideboom. After doing this project, the students will have another tool in helping them present projects.

### OBJECTIVE
- The students will research a subject either related to that specific class, or a subject of their own.
- Once they have the information, they will put a presentation together on Slideboom.
- They will present the presentation to the entire class as though they were actually teaching.

### LEARNING ENVIRONMENT
The students will mainly be working on their own. They will need to go to the library to research and have internet access. They can use open lab time and extra time during class to work on it.

### TYPES OF STUDENTS
The students will be in college and the subject matter is up to the teacher.

### MATERIALS
- Internet
- Computer

### PROCEDURE
A. The students will research a certain subject matter either related to the class or one they chose. It is up to the teacher to decide this.
B. Once the research is finished, they will begin planning what information goes on which slide. They can use notecards, flowcharts, outlines, or whatever they need to prepare.
C. Once the preparation is finished, the student should log into Slideboom by creating an account.
D. After this, the student will create presentation on Slideboom using pictures, sounds, and/or videos relating to their subject.
E. Once the presentation is completed, the student should look around on Slideboom and see if there are other presentations on the site to use for their own presentation.
F. The student will write a one page paper about what they have learned by using Slideboom, what they could have done better, and what they like about the project.
G. The student will then present the presentation to the class to teach them a lesson. They should present as though they were teaching the class and they are in charge.

### APPLICATION
After the project the students will have a good understanding of how to use Slideboom. They will have another resource to use when presenting something and have another website to research on.

### EVALUATION
The project will be graded by a rubric created by the teacher. The rubric should contain things such as a proper amount of slides, subject matter clearly presented, pictures/videos/sounds, other presentations from Slideboom.com, and length. Also, the one page paper will be graded along with the presentation itself.
