

Physics Lesson Plan

Title and Grade Level

High School Physics
(Grade 10-12)

Overview

This lesson is for students to take control of their own education. They will be assigned a chapter of their Physics textbook about properties of matter. There will be lectures during class but no specific assignments for each night. The students have to complete their book assignments on their own and prepare themselves for the exam. They will do this using Toodledo. They will come up with their own schedule with completing the chapter and it is all up to them.

Objective

After using the Toodledo website students will be more independent and understand planning in organization in learning. This will prepare the students for a college learning setting. The students will be able to complete the exam with 75% accuracy after using this method.

Standard

The standards covered are high school physics standards P.1.1-P.1.4.

Materials

Students will need

- Computer (with internet access)
- Physics Textbook
- Lecture Notes

Procedure

Students will learn on their schedule. They will come up with their own lesson plan for this week following some guidelines.

Evaluation

Students will be tested at the end of the chapter with a Unit Exam.
