Bing Economics

Grade-9

Overview
Students will use Bing to navigate through the Internet and find the lowest cost on 3 particular items.

Objective
During this activity students will be able to:
- Use Bing to find information about a variety of products in order to find the lowest cost.
- Navigate through Bing and understand all its unique features.

Materials
Computer
Product List

Procedures
Students will receive a product list and start to search for each of the following items
- 16gb I-pod Nano
- Yellow Nike Shox
- Wilson Tennis Racquet
Students are required to find at least three prices for each item and cite their sources to ensure they have found one of the lowest prices. At the end of the class students will compare their results to see who found the lowest price on each item.

Evaluation
Instructor will make sure that each student has found three different prices on each item and cited where they found their information. Instructor will also find which student found the lowest price for each item.
