

Secondary Science Class (STEM)

Overview	For this project, students will learn how to research and share information, using Shareflow, with each person in their group about ecosystems.
Objective	After completing this assignment, students will know how to correctly share information with each person in their group using Shareflow.
Standards	10.4.4 - Use clear research questions and suitable research methods, including the investigation of text and electronic resources and the conducting of personal interviews, to compile and present evidence from primary and secondary print or Internet sources. 10.4.9 - Use a computer to design and publish documents by using advanced publishing software and graphic programs.
Materials	<ul style="list-style-type: none">• Access to a computer that allows Shareflow, as well as the internet
Procedure	<ol style="list-style-type: none">1. Have each group of students choose a topic about ecosystems to research online2. Once research has started, members of the group should share information found with each other on Shareflow, to compile one research paper.3. After all collection of data found is and collected from Shareflow, the research paper should be at least 3 pages.
Evaluation	Students will turn in their finished paper, which should follow APA/MLA guidelines. Also, class time spent in the computer lab, students will be evaluated on being able to share at least three sources found, using Shareflow.
