

# SOC 10000

Post Secondary

## Overview

Students will be creating accounts on <http://www.plancast.com>. With these newly made accounts, students will be finding others within the class and creating events with the intention of getting together to study.

## Objective

Students must use their Plancast account to set up group study meetings. Everyone invited must be in Soc 100, and screen captures should be taken in order to show that the event has been created.

## Learning Environment

The learning environment will start off in a lecture hall, however the actual work will be done in any location where the event is made. This could be a library, a dorm, or any other place suitable for a group study session.

## Material

The materials that will be needed will consist of any study materials. Books, lecture notes and online materials.

## Procedure

1. While in class the professor will let the students know of Plancast.
2. After giving a short example of the website and it's uses, the professor will instruct the students that they need to create an account, and must find names of three or four students around them.
3. With every student finding three or four students around them, the class will be very spread out which will allow for the next step.
4. Once logged in to Plancast, the students should make plans for when they are free to study, and when they plan to study.
5. Rather than creating planned events, posting daily tasks such as this is

what makes Plancast stand out from other event planning sources.

6. The students should then invite the three or four people whose names they found while in lecture. This will create a large sample of people from the class since the people that these students found, will have also found three or four different people.
7. With a large majority of the class now inter connected through Plancast, students must plan to go to another study event that someone else has posted and screen capture the event.

## **Evaluation**

Evaluation will be based off of a study session evaluation form that the students should print off of the course website. Along with the evaluation, the event screen capture should be printed off. All of these things combined will open up the students to a large database of people doing the same things as themselves which will make group study sessions easier.
