Amazon Rainforest Animals
By: Tallia Hasser

Overview	The purpose of this assignment is for students to learn about the different types of animals found in the Amazon Rainforest in South America. They will have to create a ReddyNote account to help them keep track of information. They must find information about the animal's habitat, use for locals, if they are dangerous, and two interesting facts about each animal.
Objective	After each student learns animals in the Amazon Rainforest they must be able to correctly present all of their information to the class with 100% accuracy.
Students	The students will be male and female of all races. The students will be from 9th – 10th grade.
Standards	
Materials	- Computer - Textbook - Information on their animals (researched)
Procedure	1. First, the student must create a ReddyNote account. The teacher will explain exactly how to sign up for ReddyNote and how everything works. 2. The student will choose three animals found in the Amazon Rainforest. They will research each one. 3. For each animal they must find: - Animal's habitat - Use of locals (past and present) - Dangerous to locals - Other locations of the animal in the world - Two interesting facts 4. They must enter and organize all of their information into their ReddyNote account. The teacher will check and grade how well the information is organized. 5. They must use this information to make a short presentation in PowerPoint explaining the information they had found on just one animal. They can chose only one animal from the three they have researched. Different fonts, graphics, and other effects must be included in the PowerPoint. 6. Each student must present his or her PowerPoint presentation to the class.
