

Virtual Technology Tutorial	
Objective	The students will learn how to use Stixy by using it as way to receive information by a teacher. Each student will be assigned to leave 2 posts in which they must
Learning Environment	The students will work individually at a personal or lab computer. They will use Stixy to create the given posts that are required.
Types of Students	The students will be in elementary education and want to communicate outside of class.
Standards	<p>1.Engineering and Technology Education: (Understand the integrated relationship of technology with other academic fields, particularly language arts, math, science, and social studies) MS. 3</p> <p>2. Engineering and Technology Education: (Work cooperatively and productively in groups to design and use technology to solve technological problems.) MS. 5</p>
Materials	Personal or lab computer with access to the internet.
Procedures	<ol style="list-style-type: none"> <li>1. The class will go down to a computer lab and introduce the students to Stixy. The teacher will have a big display on the pull down white screen and each student can have their own computer to follow along as hands-on activity.</li> <li>2. Wait until all the students have full attention and are ready to go. If the students have not used Stixy, they will get signed up. The teacher will show the students there is a group for them to join so that they can access all of the students post from all the other classmates.</li> <li>3. Invite them to the group by using the school easy email that was required to have for all students. They will accept and sign in as a user name.</li> <li>4. Will teach them the basics: how to create a little “Post-It” and type within it, add a document to the page, make colorful posts, fancy fonts, and textured writing (bold, underline, etc.), and sized writing.</li> <li>5. Students will be required to post 2-3 posts on Stixy with of one those being a written document (e.g. Microsoft Word) and another being color- coordinated through Stixy. The writing must be easy to read. The students will need to do this on their own time for homework. What they completed during the class time will not be acceptable.</li> </ol>

Application	After learning how to use Stixy, the students can use it outside of class if they would like.
Evaluation	I will grade them on how well they do this assignment. The students must become familiar with Stixy before they go and post 2 or 3 documents to it. It will help them with communication with the other students.
