

Post Secondary

Overview:

Students will do a photography project in groups of 3 involving an international partner and their instructor. They will sign up for a Tweeter account and work together to form a webpage using their pictures uploaded via TwitDoc.

Objective:

Students will learn to work together and use file sharing to communicate and put together a collage of similar relating photos from the first photo sent to them by their instructor. They will give a presentation and explain how the photos relate.

Material:

- **Tweeter account/TwitDoc**
- **Cell phone and/or camera**
- **Computer**

Procedure:

1. **Students will be paired in groups of 3, along with an international partner. They will make a list of numbers and order themselves 1-4, then 5-8.**
2. **Student number 1 will receive a picture message from instructor, giving them a photo of something such as a flower, building, person, food etc.**
3. **The point of the project is to allow the students to make a collage that leads one picture to the next; rather it is because of a relation, color concept, rhyming, or angles. The point is to be creative and make the next person in line for a picture to think.**
4. **The first person will then take their photo and via TwitDoc upload and send it to the person on the list as number 2. The process will continue until the 4th student and then numbers 5-8 will continue again.**
5. **Once the pictures have been uploaded and collected, one student will volunteer to print out and put together the photos.**
6. **Each group will be required to give a presentation (international student will be present via Skype) and explain how their photo related to the one they received.**

Evaluation:

Students will present a paper that has been worked on collectively that discusses what they have learned about relating one person's point of view (photo) with another. They will talk about seeing things through others eyes and prospective. Students should also discuss the way and experience they used TwitDoc for photo sharing.
