Technology is literally taking over the world. The Students will have to create their own website promoting a new, not widely know technology that is innovative in its respective field. Then they will all make a glog so there is a repository of all of these technologies readily available for the public to view.

- Students will do research on technology among a field of their choice (construction, automotive, educational, etc)
- They will then make a website with everything from pricing to different ways in which it could be used.
- Then they will create a glog which will be like a
### Standards

**MS.6**
Identify societal and personal needs and opportunities that can be addressed through technology.

**MS.6.C**
Outline the innovation and invention process

### Materials

- Access to a computer with internet
- Sign up and create a Glogster Account

### Procedure

1. The Professor will introduce the project and hand out the guidelines for what type of information can be used.
2. Then the students will have three weeks to have their topic approved by the professor.
3. By week seven the students must have created their website URL.
