## Technology Lesson Plan

### Grade Level Objectives

<table>
<thead>
<tr>
<th>5-6</th>
</tr>
</thead>
<tbody>
<tr>
<td>Following this activity, students will be able to:</td>
</tr>
<tr>
<td>- Operate CNX.org to find lessons on technology</td>
</tr>
<tr>
<td>- Teach a someone older and less tech savvy how to operate CNX.org</td>
</tr>
</tbody>
</table>

### Materials

- Computers (at home and at school)
- A older person who is not computer savvy (grandparent or aunt/ uncle or neighbor)

### Procedures

1. Before starting this activity, students should know:
   - How to use an internet browser.
   - Basic computer skills
2. Give the students the web address for Connexions. (CNX.org)
3. Give a hand out with step by step instructions on how to use Connexions.
4. Take all children to a computer lab during school hours and go through the steps on the work sheet mentioned above.
5. After, you all as a class, have searched Connexions for a few terms and have gone over basic commands, have the students “teach” one another how to use it.
6. As an extra step, you can have the students show a different class how to use Connexions.
7. Once you feel the student has mastered Connexions, assign them their homework. The homework is to go show someone how to use Connexions. To prove that they have done it, the person they are teaching has to sign the bottom of a note (the note will have explained the assignment).
8. You can repeat this lesson with other websites as you feel it is needed.
