Project #1 Lesson Plan  
9-12 lesson plan using Google Notebook

## INTRODUCTION

At the completion of The Fellowship of the Ring, students should have a profound knowledge of everything that occurred in the book. This will be the key focus of the lesson plan using the application Google Notebook. Students will be asked to compare the written work and the screen adaptation of the same name.

TARGET CLASS TIME: 60 MINUTES

## LESSON PLAN LAYOUT

**By this point in the semester, students have finished reading The Fellowship of the Ring. They have completed the reading and taken the test over the book, so now they will compare the book and movie. This comparison will not consist of just watching the movie. Students will be put into pre-made groups of 3-4 members. These groups will work both inside and outside the classroom to complete their work for the next school day. Class will begin with and explanation of the project. Students will need**

**to use Google Notebook to compare two versions of The Fellowship of the Ring. Due to the file-sharing capabilities of the program, students can work as part of a group without trying to find a common meeting time. The explanation of the group work should take from 5-10 MINUTES.**

**After explaining the group project, the students will need to be instructed in the use of Google Notebook. Using a pre-made Power Point presentation and the page from <https://wiki.itap.purdue.edu/display/INSITE/Google+Notebook> will help explain to students how the program works and allows for any questions before beginning the project. This should take 20 MINUTES.**

**Once the students have been instructed in the use of Google Notebook, they will be put into their groups and begin an overview section for the project. This will include talking about a and recording the ways they believe the book and movie will differ and what sections each will review that night. If computer access is available, students can also begin working on their electronic note taking. This section will take 30-35 MINUTES or until the end of class.**

## CONCLUSION

This project teaches students to work as a group while using the application Google Notebook. They can cover most of the book in a small amount of time while also being able to access sections their group members covered for them. The online notebooks can be made public for easier grading by the teacher. This project focuses on working well as a group while using a web application to take easier notes and share those notes with others in the group.
