<th>Lesson Plan for Upper Elementary</th>
<th>Averages</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Overview</strong></td>
<td>This lesson opens with a brain teaser in averages. The students then are introduced to the concepts of averages and create their own examples.</td>
</tr>
<tr>
<td><strong>Objectives</strong></td>
<td>To learn the concepts of averages and apply this knowledge to create a spreadsheet document.</td>
</tr>
</tbody>
</table>
| **Materials**                    |  - Pencil  
  - Paper  
  - Computer/internet access  
  - Spreadsheet program (Google Sheets) |
| **Procedures**                   | Step 1: Teacher explains the concepts of averages and introduces the brain teaser.  
Step 2: Students complete the brain teaser. After completing the brain teaser, students can work alone or in groups to create their own data to take averages.  
Step 3: Students record their data and calculate the averages.  
Step 4: Students enter data into the spreadsheet program, such as Google Sheets, and create a bar graph or some sort of graph to display their data. |
| **Evaluation**                   | The brain teaser is worth 5 points,  
The averages in a displayed graph worth 15 points. |
