

## Fine Arts: Still-Movie Making

Objective: After completing this lesson students will:

- be able to use BubbleShare to design a short still-movie.
- become familiar with different types of artistic expression.

Overview: Students will use the photosharing program, BubbleShare to store photos and make a presentation that will look similar to a movie.

Materials: 1 Digital camera per group, 1-3 computers with internet access and a microphone, and 1 shared account to BubbleShare

Procedure: 1. Students will be divided into groups of 4-7

2. Each group will need to write a script of the narration that will be added to each picture.

3. Students will take multiple pictures that will be scenes of a movie-like presentation.

4. Using BubbleShare, students will make the presentation and add audio captions to each picture. In this audio is where any kind of script will be used. It is important to remember that there can only be 30 second recordings for each photo. So, there may be presentations with a lot of pictures.

Grading: Presentations must have a beginning, middle and conclusion. There should be a problem and a solution or some sort of artistic expression.
