### Objectives
Following this lesson, students will be able to identify, create, and complete a food web.

### Overview
After completing an in-class lesson about the food chain and survival of the fittest, students will create their own food web.

### Standard
ISTE Standard 3 C

### Materials
- Science textbook
- Computer Access

### Procedures
1. The teacher will explain the food chain to students in class.
2. Students will select at least 7 specimens to place on their own food web.
3. Using the Scriblink whiteboard, students will create a unique food web showing the order of the food chain.

### Grading
This assignment will be graded as a homework assignment, worth up to 10 points.
