

Adobe Connect

Application: Adobe Connect

Platform: iOS, Android

With the Adobe Connect app, you can join Connect rooms and participate in the online conversation. While a bit more limited than the web browser version of Connect, the iPad app does allow you to take on roles of Host, Presenter, or Participant, depending upon how you are assigned. You have access to audio and video streams, and you can share your audio and video as well. Interaction tools (such as Raise Hand and chat) are also available to app users.

Note: Adobe Connect app users will be identified as using the mobile app (a phone icon will appear next to your name)

Note: You will have to do initial creation and setup of your Adobe Connect room using browser-based tools
