

View File Macro - PowerPoint

The **View File Macro** also allows you to embed an PowerPoint slideshow document into your Confluence page. First attach the document to a wiki page and then use the view file macro to display the document's content. Note that you can also embed a PowerPoint file from another space within Confluence by including both the "space key" and page name where the file is located.

Embed code for PowerPoint files

From an attached file:

```
{viewfile:PowerPoint Embedd test file.pptx}
```

From another space:

```
{viewfile:space=wikiEA|page=PowerPoint Embed Example|name=PowerPoint_test.pptx}
```
